

More performance with EC ventilation

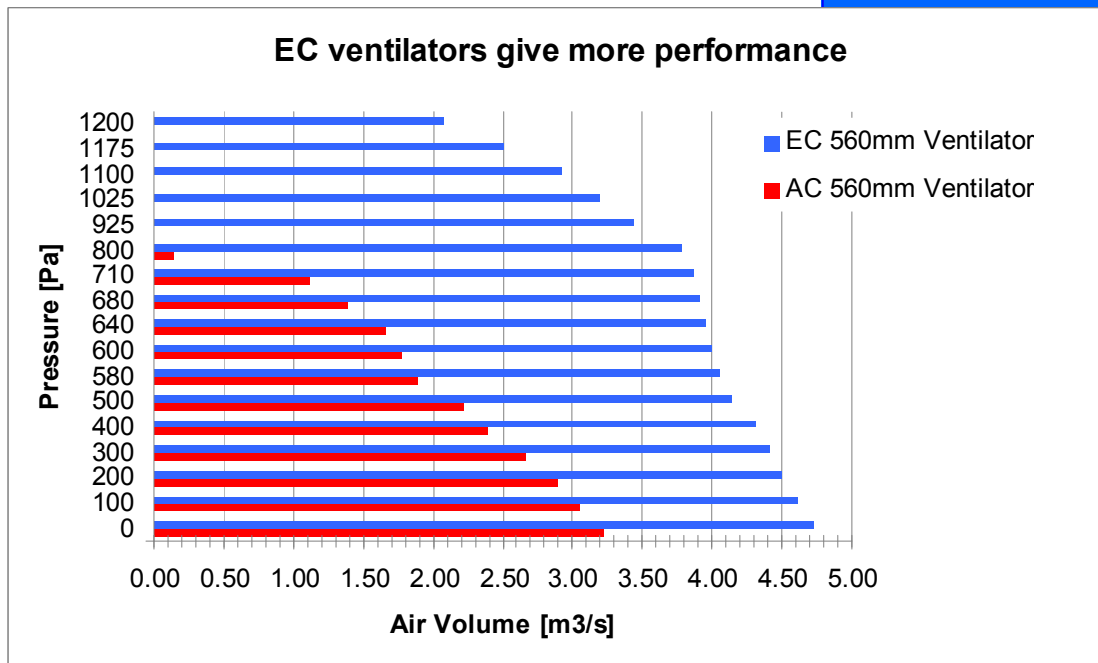

Ventilation product is widely available in both AC and EC.

EC motors are not based upon tradition motor technology of AC voltages. Instead using the permanent magnet motor, EC motors are regulated by current instead of voltage. This means that EC can perform over synchronous.

EC gives greater performance

Below is shown the performance of two ventilation units based on backward curve 560mm fans.

EC gives 50% more air

Typical ventilation units as shown below are available in both AC and EC.
